

Supplementary Figure 1: HOPE treated DCD livers were matches 1:2 with un-perfused DCD livers and DBD livers in terms of donor asystolic warm ischemia (A) and recipient BAR score (B).

Supplementary Figure 1: Matching Groups

Supplementary Figure 2: In the groups of un-perfused DCD livers, eight patients developed multifocal ischemic cholangiopathy with the need to retransplantation in 6 of 8 cases within 5.1 months (median).

Supplementary Figure 2: Multifocal ischemic cholangiopathy in 8/50 un-perfused DCD liver grafts
